Stove Thermometer

FIR116

The Valiant magnetic Thermometer is designed to display the temperature very clearly to enable the owner to maintain a safe and efficient operating temperature and to assist to optimise the fuel consumption and maintain maximum performance.

The Valiant thermometer is of robust design, with a strong magnet; for use on any hot Steel or Iron surface including Stoves, BBQ, Ranges, Patio Heaters, Flue pipes or Chimineas.

Fitting:

- It may be placed on the top, front or side, on a flat or curved surface. The built in magnet will maintain its hold on to steel up to temperatures of around 800°F (425°C).
- For most Solid Fuel Stoves, place the thermometer where your dealer or manufacturer recommends, it is usually placed on the stove where the surface is hottest.
- Will hold securely to most vitreous enamel, iron or steel flue pipe.

Operation:

- Refer to manufacturers specification for the ideal operating temperature, where the fuel consumption, heat output is at its most efficient, normally between 125°C-300°C, (260°F and 575°F) the Optimum Burn zone.
- Temperature is indicated by the pointer.
- Allowing the fire to slumber- keeping air valves closed, using unseasoned or damp fuel will reduce burn temperature, discolour glass and increase soot and tar deposits

- Running with wide open vents, soft woods or unsuitable fuels may cause damage to your stove, liner and surrounding objects, so for best operation monitor the temperature.

Safety Measures;

- Never touch when hot
- All magnets reduce in strength when very hot, returning to normal when cooled.
- The presence of Carbon monoxide may increase at lower burn temperatures especially if allowed to slumber with closed vents. Operate Stove at optimum temperatures.

Specifications:

Dimensions	63mm diameter
Weight.....	50g
Carton dims	150x109x19mm
Carton weight	75g
Fixing	Ferrite magnet
