

CompacTi

The future of LP Gas Electronic Cylinder regulation

Putting you in control
of your LP Gas
Cylinder supply

The new way to manage
cylinder customers by
app or telemetry

EVOLUTION[®]

CLESSE CompactTi

The future of LPGas / Electronic Cylinder Regulation

Transform standard Clesse CompactTR auto-changeover regulator (ACOTR) into an electronic hybrid

The electronic device slots into the back of the regulator and using the dedicated application you will achieve more efficiency, remote monitoring and convenience from the comfort of home or managing holiday and residential park locations

What can the CompactTi device do for me?

S Standard

Free to use in CompactTi app

- **No more shaking cylinders** and emergency customer cylinder requests
- **Reduce the time** spent out on park exchanging cylinders
- **Install more than one** CompactTi device on a single account. Start using straight away at no extra cost
- **Use in app "View"** to see devices installed on the account
- **"Site Scan"** – go and find the cylinders to exchange. Walk or drive by, at a safe distance and improve efficiency
- **Filter the results** of collected readings on the app and sort to help you manage collecting many devices in one go
- **Minimise customer contact** with park site staff

Get more out of your cylinders

CompactTi – unique patented technology enables the device to delay the cylinder exchange notification based on usage and environmental conditions

The app programs the device with installation characteristics, and provides advanced information showing what's happening and when to change

Electronic gas regulator optimisation

On average you could be sending back up to 7% of usable LPG to the suppliers, particularly during colder months and high gas usage – Clesse CompactTi CII features embedded technology as standard in every device. Whether you decide to do a full installation or not from day one you know that you're starting to use the cylinder more efficiently

Real time measurements of cylinder pressure, temperature, and time are processed using CII intelligence to optimise your existing CompactTi ACO regulator

Example scenario:

- 50 fleet properties, each using around 15 x 47kg cylinders per year or more dependent on conditions
- 15 Cylinders each x 50 caravans, with up to 7% residual LPG remaining in the cylinders could be going back to the supplier
- Potential annual savings of £3,500 from sending unused gas back to the cylinder supplier.
- Together with saving time on site you could be returning the investment on the telemetry devices in under a year

Build customer confidence

Compatible with Clesse ACOTR regulators, and is setup within 10 minutes, customers view the cylinder status on the app within bluetooth range as standard with no monthly cost

Subscribe to Standard Plus and enter the customer account details to smoothly transfer data using the in app function "ORDER GAS" and start receiving gas order requests direct to your email inbox.

SP Standard Plus

Low cost upgrade service for the CompactTi app

Download "Site Scan" harvest from CompactTi server & use ORDER GAS facility for owner fleet

- **Multiple users** on a single park account can "Site Scan" fleet stock to harvest cylinder status
- **Download data from server** for site cylinder manager to send to e-mail
- **Trace unread items** to capture full portfolio of devices
- **Receive gas orders** directly through the app from owners mobile devices straight to your inbox
- **Improve back office efficiency** to plan cylinder exchanges programme combining harvested fleet data and owners order gas mails

P Premium

Full communication package service for CompactTi electronic device

- **No need to drive**, walk by, or physically make regular cylinder checks
- **Late night calls eliminated** from remote customers with no gas, offer customers a complete managed cylinder replenishment service as a bulk tank replacement
- **Receive daily e-mail** spreadsheet with comprehensive details of cylinders to exchange
- **Access to web portal** option for additional analysis supported locally by Clesse. Great for managing large or multiple sites centrally
- **Streamline cylinder operations** and further improve back office efficiency, scheduling maintenance teams and cylinder deliveries

NB-IoT

The complete remote monitoring solution for contract customers using an installed private network, GSM or IoT communications providing consolidated information remotely

SP Standard Plus

Why will my Gas Cylinder business benefit from Compacti

- **Save time and improve operations** by receiving mail requests straight to your email inbox
- **Plan deliveries** efficiently to save costs
- **Manage holiday or park home sites** using drive by site scan facility
- **Customer service and retention** - the device is linked to your company displaying name and logo in Order Gas function
- **Customers receive** email reminders to log in and check the cylinder status
- **Simple to use** easy to implement in any business
- **Removes customer need** for physically checking cylinders and unnecessarily turning knob position
- **Perfect for elderly or disabled** users to view at a distance
- **No more last minute calls** from distressed customers
- **Retain non contract customers** by offering this service

P Premium

- **No need to drive**, walk by, or physically make regular cylinder checks
- **Late night calls eliminated** from remote customers with no gas, offer customers a complete managed cylinder replenishment service as a bulk tank replacement
- **Receive daily e-mail** spreadsheet with comprehensive details of cylinders to exchange
- **Access to web portal** option for additional analysis supported locally by Clesse. Great if managing large or multiple sites centrally
- **Streamline the cylinder operation** and further improve back office efficiency, scheduling maintenance teams, and cylinder deliveries

Ideal for:

- **Bulk tank replacement** – uneconomic bulk tanks or new business to maintain contractual services
- **Oil to Gas** – convenient replacement solutions based on cylinders
- **SMA aerial connection** – House all 4 cylinders in an aesthetic cabinet
- **Optimise logistics** and operations – integration into existing reporting systems
- **Add metering** to change your customer offer
