CompacTi 

**The future of LP Gas
Electronic Cylinder regulation**

Putting you in control of your LP Gas Cylinder supply

EVOLUTION®

CLESSE Compacti

The future of LPGas / Electronic Cylinder Regulation

Transform standard Clesse CompactR auto-changeover regulator (ACOTR) into an electronic hybrid

The electronic device slots into the back of the regulator and using the dedicated application you will achieve more efficiency, remote monitoring and convenience from the comfort of home or managing holiday and residential park locations

What can the Compacti device do for me?

S Standard

Free to use in Compacti app

- **No more shaking cylinders** and emergency customer cylinder requests
- **Reduce the time** spent out on park exchanging cylinders
- **Install more than one** Compacti device on a single account. Start using straight away at no extra cost
- **Use in app "View"** to see devices installed on the account
- **"Site Scan"** – go and find the cylinders to exchange. Walk or drive by, at a safe distance and improve efficiency
- **Filter the results** of collected readings on the app and sort to help you manage collecting many devices in one go
- **Minimise customer contact** with park site staff

SP Standard Plus

Low cost upgrade service for the Compacti app

Download "Site Scan" harvest from Compacti server & use ORDER GAS facility for owner fleet - SEE BACK PAGE

- **Multiple users** on a single park account can "Site Scan" fleet stock to harvest cylinder status
- **Download data from server** for site cylinder manager to send to e-mail
- **Trace unread items** to capture full portfolio of devices
- **Receive gas orders** directly through the app from owners mobile devices straight to your inbox
- **Improve back office efficiency** to plan cylinder exchanges programme combining harvested fleet data and owners order gas mails

P Premium

Full communication package service for Compacti electronic device

- **No need to drive**, walk by, or physically make regular cylinder checks
- **Late night calls eliminated** from remote customers with no gas, offer customers a complete managed cylinder replenishment service as a bulk tank replacement
- **Receive daily e-mail** spreadsheet with comprehensive details of cylinders to exchange
- **Access to web portal** option for additional analysis supported locally by Clesse. Great for managing large or multiple sites centrally
- **Streamline cylinder operations** and further improve back office efficiency, scheduling maintenance teams and cylinder deliveries

Get more out of your cylinders

Compacti – unique patented technology enables the device to delay the cylinder exchange notification based on usage and environmental conditions

The app programs the device with installation characteristics, and provides advanced information showing what's happening and when to change

Electronic gas regulator optimisation

On average you could be sending back up to 7% of usable LPG to the suppliers, particularly during colder months and high gas usage – Clesse Compacti CII features embedded technology as standard in every device. Whether you decide to do a full installation or not from day one you know that you're starting to use the cylinder more efficiently

Real time measurements of cylinder pressure, temperature, and time are processed using CII intelligence to optimise your existing Compacti ACO regulator

Example scenario:

- 50 fleet properties, each using around 15 x 47kg cylinders per year or more dependent on conditions
- 15 Cylinders each x 50 caravans, with up to 7% residual LPG remaining in the cylinders could be going back to the supplier
- Potential annual savings of £3,500 from sending unused gas back to the cylinder supplier.
- Together with saving time on site you could be returning the investment on the telemetry devices in under a year
